

MAUNT

M00000044
Stripper, 1.5 - 6.0mm, Knipex

Description

These stripping pliers from Knipex have a new type of stripping mechanism. These pliers enable problem-free stripping of insulation materials that are difficult to work with, e.g. Teflon®, silicone, Radox®, Kapton®, rubber and multilayer insulation. There is no damage to the wire thanks to the precisely ground blades. Even thin braided wire is stripped without damage. The stripping pliers have length stops which ensure equal stripping lengths in serial work. The pliers have 4 interchangeable blades, a flexible mechanism, compact design and light weight. In addition, the pliers are easy to use thanks to their handy shape.

The pliers are 195mm long.

Brand

Knipex

General information
