Fiber optic enclosure GRP repair compact, 5-6.5mm

Description

FTTH networks are expanding all the time. Plans for the future are very ambitious in the Netherlands and the rest of the European Union. The more customer connection cables or pipe that are laid, the greater the chance of faults occurring during construction or afterwards due to excavation work. It is then important that a technician can make a repair quickly and compactly. Besides repairing, the Fiber optic enclosures can also be used to extend and/or connect the customer connection cable or pipe. This both above and below ground. The universal character of the Fiber optic enclosure gives you complete freedom of choice with regard to the FTTH concept.

The clear work sequence allows the fitter to carry out his work quickly and faultlessly in a compact socket. Water tightness IP68 is tested according to EN 60529.

Brand

Attema

Product specifications

Cable diameter	5.0 - 6.5mm
Housing	Plastic
Halogen-free	Yes
Colour	Black
Dimensions	85mm (diameter) x 155mm (length)
Strain relief	Yes
Lockable	Yes
Suitable for number of fibres	2
Type of coupling	Fusion welding using ANT/mini heat shrink or 2.4mm x 45mm heat shrink

Other specifications

Protection class	IP68 according to EN 60529
