Miniflex tube, 5/3.1mm, white

Description

The miniflex tube is a flexible tube made to protect fibreglass. The tube is very compact, considering it has a diameter of 3.1 mm. This diameter is half that of similar products on the market. The miniflex tube is made of lightweight material, which means that less force is needed when installing, minimising potential damage to fibres. The tube is fire-retardant, halogen-free and UV-stabilised. In addition, it is kink-free. Something that no other fibre protection tube in the world also has. It ensures that the tube can be bent and twisted during installation and use, without damaging the fibre inside. The miniflex tube is supplied per 100 metres on a reel.

Brand

PPC

General information

Tube colour	White
Outside diameter pipe	5.0 mm
Inside diameter pipe	3.1 mm
Number of metres per reel	100 m
Weight Suitable for	Lightweight, only 5 g/p FTTH/FTTx - Outdoor and indoor Data infrastructure, Transport and Transport

Other specifications

Tension	100N
Pressure resistance	1400N
Bending radius (passive)	10x OD
Bending radius (active)	5x OD
Installation temperature	-10°C to 60°C
Operating temperature	-10°C to 60°C
