

MAUNT

M00000200

**Connector cleaner, Optipop R, 1-slot, FC-LC-MPO-MT-MU-SC-SC2-ST,
Optipop**

Description

The end faces of optical fibers have a very small diameter, so small spots can sometimes form on them without being visible to the naked eye. These spots can negatively affect the performance of the fibers, which is why the fibers must be cleaned immediately before the connection is made. Because the light in optical communication is confined to an extremely small core with a diameter of 10 microns, the power density is very high: if a contaminant adheres to the core, it can burn and the heat can melt the core. To prevent the resulting communication failures, the connectors must be cleaned with an optical connector cleaner. The Optipop Reel Cleaner is used for this purpose and cleans approximately 400 connectors per tape.

Brand

Optipop

Physical specifications

Window type	1-slot
Suitable for	SC, MU, SC2, LC, FC, MT, ST, MPO
Dimensions (W x H x D)	120 x 80 x 37 mm
Cleanings per cartridge	Approx. 400
