M00000201

Connector cleaner, Optipop Reel Cleaner, MPO/MTP (male)

Description

The ends of glass fibres have a very small diameter. This sometimes causes small spots to appear on them, without being visible to the naked eye. These specks can negatively affect the performance of the fibres and so, just before making the connection, the fibres need to be cleaned. In recent years, the power of optical communication light has become stronger. Because the light is confined in an extremely small core of 10 microns diameter, the power density is very high. If a contaminant attaches to the core, it can burn and the heat can melt the core. To prevent the resulting communication failures, the connectors should be cleaned with optical connector cleaner. Optipop Reel Cleaner is the right product for this. Per tape, you can clean around 400 connectors. This Cleaner is made for cleaning male connectors.

General information

Brand	NTT Advanced Technology Corporation
Window type	1-slot
Suitable for	MT with pin MPO with pin
Size (w x h x d)	120 mm x 80 mm x 37 mm
Cleans per cartridge	More than 400
