**M00000214**
**Tube stripper, 6.4-14.3mm, blue, Ideal**

**Description**
The Ideal stripper is a cable stripper with two side blades and one slitting blade, each with an adjustable cutting depth. It strips round cable jackets with a diameter of 6.4 to 14.3 mm, such as fiber optic jackets, coaxial cables and other specialty copper cables. A shallow cutting depth cuts through the outer jacket only, a deeper cutting depth cuts through to the conductor. One or both side blades can be used at the same time, for end stripping or for a two-step or window strip. The head of the stripper has a guide channel for slitting the jacket lengthwise with the slitting blade. The spring-loaded handle keeps pressure on the jacket during stripping.

**Brand**
Ideal

**Technical specifications**

| | |
|---|---|
| Cable diameter range | 6.4 – 14.3 mm |
| Suitable for coaxial cable | RG-11, RG-8 |
| Cutting method | Radial stripping, longitudinal stripping |
| Cutting depth | Adjustable per blade |
| Included blades | 3 straight blades (installed) |

**Physical specifications**
