

M00000342

Splice protectors, heat shrink (crimp), mini MMK-30, 30mm, bag 50pcs

Description

These heat shrink (shrink) splice protectors are used to protect the fusion weld. Once the splice is made, the Splice protector is slid over the welded part of the glass fibre cable and placed in the oven. In this, the splice protector melts, providing optimum and hermetic protection for the welded section. These crimps fit into the splice protector holder.

Brand

Maunt

General information

Material shrinkage	Plastic
Material strength element	Stainless steel
Diameter	1.26mm
Length	30mm
Diameter strength element	0.5mm
Strength element length	30mm
Size of fibre	250µm
