Cable stripper, 400-kit, 8.5mm (Draka cable FTTH) , Ripley Miller

Description

Ripley Miller has developed these fibreglass pliers specifically for 8.5mm draka cables, which are used in FTTH projects. The double blades of the stripping tool easily cut through the cable sheath (lengthwise) and provide a very precise depth of cut, preventing fibre damage. You can also make a window cut with this cable stripper. The set comes in a black case and includes spare blades. The guide blocks on the tool can be replaced with guide blocks of a different diameter.

Brand

Ripley Miller Tools
