Cable stripper, US15-7000, 10-60mm, Ripley Miller

Description

The Cable Stripper, US15-7000, 10-60 mm, Ripley Miller, is a specialised tool designed to enable a wide range of cuts for cables with diameters between 10 and 60 mm. With its hardened steel blade, the US15-7000 offers fast, safe and accurate removal of both hard and soft insulated cable sheaths without damaging the underlying layers. Safety comes first, which is why the blade features a safe recessed design to prevent possible injury and damage to the blade. This versatile tool is compatible with large telecom cables and large fibre optic ducts. It also has the ability to easily adjust the blade position, this allows you to perform ring, spiral and longitudinal cuts with precision. The blade depth knob can be adjusted in 0.002-inch (0.05-mm) increments to a depth of 0.177-inch (4.5mm), and features both a convenient inch and metric scale for guaranteed precision on every cut. In addition, the US15-7000's reinforced diameter adjustable jaw provides precise stability between the blade and sheath. A moving threaded rod allows you to easily adjust the jaw to the diameter of the cable.

Brand

Ripley Miller

General information

Brand	Ripley Miller
Material	Shock-resistant polymer
Handles	Ergonomic
Length	130 mm
Weight	250 g
Cutting type	Radial, spiral, longitudinal
