Fibre optic connector pliers, insert/extraction, MC04-7000, Ripley Miller

Description

The Ripley Miller MC04-7000 fibre optic connector pliers are specially designed for safe installation and removal of connectors at transceivers, without interference with adjacent connectors. Its narrow design makes the pliers ideal for use in high-density transceiver environments. The waisted tip ensures a reliable grip on connectors, while the built-in jaws provide space for the connector housing. The pliers are equipped with angled handles for ease of use. The pliers are mainly used within high-density business or data centre environments.
