Splice cassette, 12-fiber, incl. cover and 12-fiber splice protector holder, Fibrain

Description

The Fibrain splice cassette is a modular splice cassette for organising fiber optic splices. This cassette accommodates up to 12 splice protectors, allowing 12 fibers to be stored. Thanks to the design with integrated fiber routing, bend radii are respected and damage to the fibers is prevented. The cassette is suitable for use in various fiber optic enclosures such as ODFs, splice closure modules and wall- or rack-mounted panels. The modular click-fit design allows multiple cassettes to be stacked, making the system scalable.

Brand

Fibrain

Physical specifications

Material type/composition	PC + ABS
Dimensions (L x W x H)	195 x 93.6 x 8.9mm
Capacity	12 fibers (expandable to 24)
Splice protector holder	Splice protectors up to 2.4mm
